

Advanced Email Protection for Microsoft 365

Keep your business safe from known and emerging email threats.

Comprehensive, multi-layered protection against malware and unknown email threats.

Anti-phishing protection against targeted email attacks.

Point-of-click protection against malicious links in emails.

Data Loss Prevention and outbound email protection.

Ultimate IT administrator control and visibility with flexible policies.

Traditionally, email security solutions focused on protection against malware, viruses and threats distributed via spam. Today, email threats have evolved, and fraudsters employ more sophisticated techniques, such as social engineering, impersonation and targeted spear-phishing attacks, to bypass traditional email security checks. Signature-based email protection engines are no longer enough on their own to protect businesses from these advanced attacks.

Advanced Email Protection for Microsoft 365 is an email security solution designed to protect your organization from sophisticated, real-time email threats. It uses multiple industry-leading email scanning engines to prevent spam, viruses, malware and phishing from reaching your mailboxes.

Advanced Email Protection offers small and medium-sized businesses enterprise-level security that is affordable, reliable, and easy to deploy, use and configure.

FEATURES

Multiple industry-leading email security engines for comprehensive protection against known, unknown and emerging threats	Sophisticated anti-phishing and targeted attack protection capabilities	"Zero hour" protection against emerging email threats through URL live-scanning	Marketing (graymail) management helps users prioritize important messages
Point-of-click protection against malicious links with Intermedia LinkSafe™	Simple, intuitive creation and management of email rules and policies in a single interface	User and admin quarantines or immediate delivery to the Junk Email folder through tight mailbox integration with Microsoft 365	Worry-Free Experience™ with 24x7 expert support (TSIA Rated Outstanding and J.D. Power Certified)

COMPREHENSIVE, MULTI-LAYERED PROTECTION AGAINST MALWARE, TARGETED ATTACKS AND UNKNOWN EMAIL THREATS

Advanced Email Protection is a cloud-based email security solution that uses multiple engines to stop spam, phishing, and all types of known, unknown and emerging malware. It benefits from threat intelligence collected from almost 1 billion mailboxes worldwide and is designed to deliver a detection rate of over 99% with very few false positives, as well as fast response to real-time threats.

ANTI-PHISHING AND PROTECTION AGAINST TARGETED EMAIL ATTACKS

As the number and sophistication of phishing emails continue to grow, businesses need to ensure that their email security includes detection, analysis and prevention of such attacks. Advanced Email Protection helps organizations detect, analyze and prevent spear-phishing and other targeted threats before they reach your mailboxes. This anti-phishing protection is designed to flag suspicious mail, identify spoofing and analyze email content and sender identity for signs of fraud and impersonation.

POINT-OF-CLICK PROTECTION AGAINST MALICIOUS LINKS IN EMAILS

Targeted and spear-phishing attacks often bypass existing security controls by embedding malicious links within email messages. LinkSafe™ URL Protection provides "zero hour" protection against known, unknown and emerging email threats. This technology rewrites all URLs within inbound mail and performs a real-time scan of the target site every time the link is clicked by the end-user to prevent users from accessing phishing sites or webpages containing malicious code.

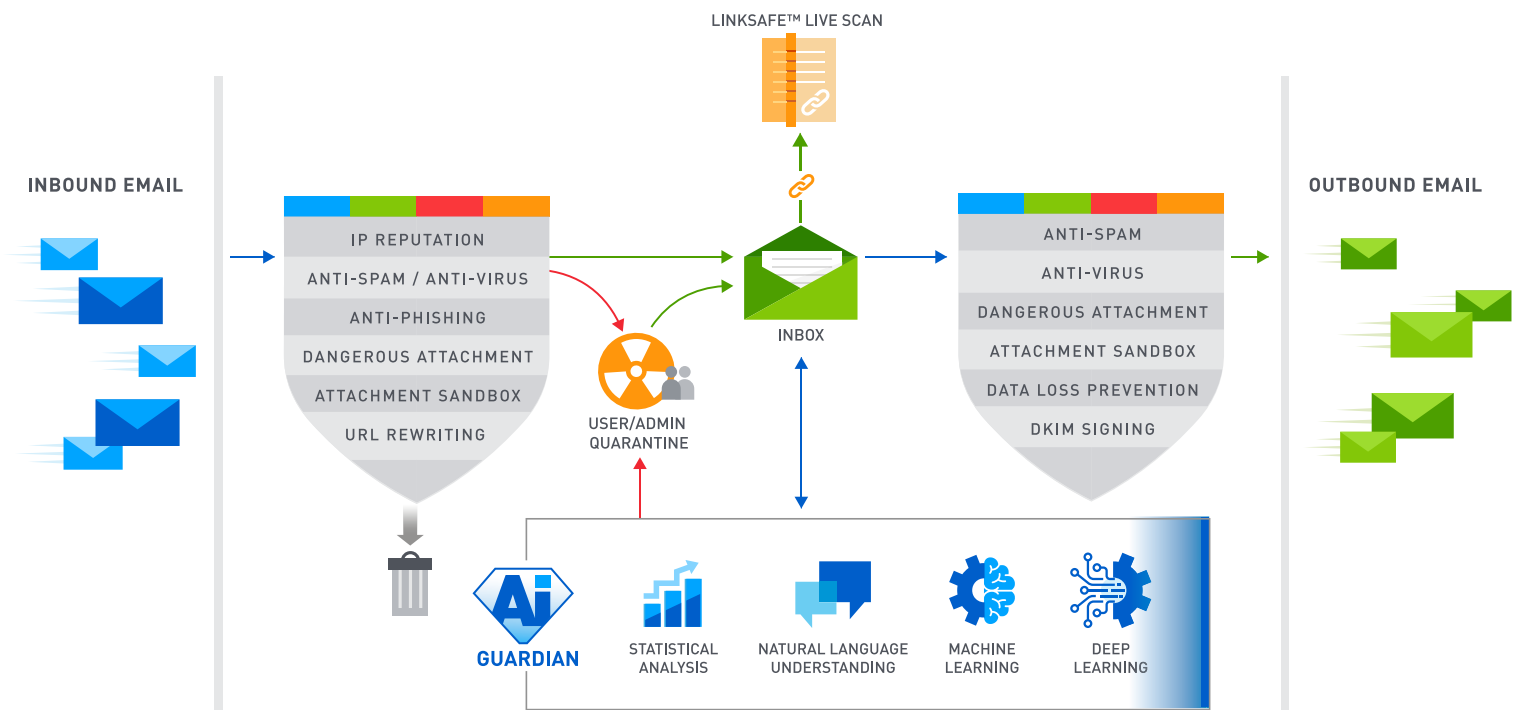

DATA LOSS PREVENTION AND OUTBOUND EMAIL PROTECTION

Business-critical email communication often involves sensitive data. Therefore, businesses need visibility and control over email leaving their organization. Data Loss Prevention (DLP) offers outbound email protection for businesses from negligent or accidental leakage of sensitive or proprietary data. Administrators can block outbound mail that violates pre-determined policies before it leaves your organization.

COMPREHENSIVE IT ADMINISTRATOR CONTROL AND FLEXIBILITY WITH VISIBLE POLICIES

Small and medium-sized businesses are often faced with a lack of resources and security expertise that leads to an inability to effectively deploy and manage email security solutions. That can leave the door open to attacks. Advanced Email Protection provides an intuitive interface that makes this solution easy to use for businesses of all sizes. Administrators have broad control over how fraudulent or suspicious mail is being handled and are able to define company-wide, group and user level policies.

J.D. Power 2020 Certified Assisted Technical Program, developed in conjunction with TSIA.
