

When your CEO spills coffee
all over his laptop moments
before his big presentation

Advantage #1: Instant access to all files

Five tips to ensure your users never lose
another file

We've all had that moment of sheer panic. Your CEO's laptop – or another colleague's device – fails just as they are about to share an important file in a pressure-packed situation. Then the questions start: Is the file backed up? Can you get to it? You're where?!

With SecuriSync® by Intermedia, the all-in-one automated backup, file sharing and collaboration solution, you don't have to worry about losing files ever again. Ensure your users can get to their files, even in the toughest of circumstances, and reduce downtime from failed hardware, lost devices and other unexpected events.

- 1 Rapidly shift to a new device**

When one computer, tablet or phone goes down, another can quickly take its place. Files are kept securely in the cloud and are accessible from virtually any device and browser. SecuriSync works across Windows, Mac, iPhone, iPad, Android, Windows Phone and Blackberry devices.
- 2 Retain any recent updates**

Files are backed up and synced in real time so they stay up-to-date whenever a change is made – not just once a day like so many other solutions. Synced files are instantly recoverable for worst-case scenarios.
- 3 Share files quickly while keeping control**

Out of necessity in the moment – say files can be accessed from a phone, but the phone doesn't work with a room's audiovisual set-up – documents may need to be shared with someone else. Never fear. Users can easily share files and folders with a click of a button, but still maintain control by setting permissions for others inside your company or at vendors, business partners and customers.
- 4 Automatically restore files to a new device**

Employees and administrators can use SecuriSync's restore feature to bring back files from any previous version, including specific points in time. Just install the SecuriSync desktop client on a separate machine to automatically restore files.
- 5 Wipe information in a hurry**

File loss is not always the result of a hardware failure. It can also happen when a device is lost or stolen. To reduce the risk of a serious data breach, any SecuriSync device can be remotely wiped of all SecuriSync data with one click. This ensures that critical business data can be removed quickly and easily from machines that have fallen outside of IT control.

SecuriSync is an easy-to-use file management service, which also helps secure and manage your critical business data. SecuriSync enhances traditional file sync and share by adding real-time backup and restore capabilities. It integrates with Exchange, Office 365, Outlook, Office and existing file servers and is backed by Intermedia's 24x7 phone support and 99.999% uptime SLA.
