

When multiple teams are working to get the new product launched on time

## **Advantage #5: Worry-free collaboration**

Five tips to ensure your users never lose another file

Successfully collaborating on any major project requires that colleagues from across an organization can easily and securely create, share and edit the right files at the right time, often all at once. But sometimes sharing documents can lead to confusion and lost information due to multiple versions and unintentional overwrites.

With SecuriSync® by Intermedia, the all-in-one automated backup, file sharing and collaboration solution, you can stop worrying that the team is losing cycles, content – and precious time – working on the wrong version, or worse, editing over each other.

## 1 **Ensure you're always working on the most current version**

Share folders with collaborators so everyone has instant access to the latest edits and changes. Users can share files and folders with a click of a button, but still maintain control by setting read/write permissions for others inside your company or at vendors and business partners outside your company.

## 2 **Collaborate in real time with Office Online**

SecuriSync works with Office Online so employees can make, alter and work together on files. Co-editing allows multiple collaborators to edit a file simultaneously, and changes are viewed in real time, shortening review cycles by reducing the amount of time required to merge edits and consolidate versions. Annotated comments keep feedback together with documents.

## 3 **Transfer the most up-to-date files without clogging the team's inbox**

Use link sharing to help ensure large files will be delivered through any email system and reduce mailbox size by automatically replacing file attachments with secure links.

## 4 **Prevent accidental overwrite and data loss**

As soon as files are created or changed, they are backed up – and instantly accessible from any browser or device. Backed-up files can easily be restored to any previous version at any time and date using SecuriSync in cases of deletion, conflicting edits or overwrite.

## 5 **Stay in control**

SecuriSync offers complete control over access and permissions, which can be edited, updated and revoked at any time, for internal and external resources. Administrators can enforce syncing, sharing and backup policies and dive into end-user content to adjust privileges, add/delete/restore files and search across the SecuriSync folder and file structure.

SecuriSync is an easy-to-use file management service, which also helps secure and manage your critical business data. SecuriSync enhances traditional file sync and share by adding real-time backup and restore capabilities. It integrates with Exchange, Office 365, Outlook, Office and existing file servers and is backed by Intermedia's 24x7 phone support and 99.999% uptime SLA.
